

MAZDA GLOBAL SUSTAINABILITY REPORT 2021

Mazda formulated its global policy on Sustainability and presented eight goals to work toward across three categories – Earth, People, and Society.

Earth: Mazda will work toward carbon neutrality by 2050 and create a sound material-cycle society.

People: Mazda will contribute to people's mental wellness and improve employee job satisfaction.

Society: Mazda will work toward realizing a motorized society free from traffic accidents and create a system that enriches people's lives.

Mazda will strive for quality improvement across all three categories – Earth, People, and Society – throughout the supply chain and explore partnerships for co-creation. Mazda will place emphasis on dialogue with stakeholders to ensure its sustainability initiatives comply with international rules, the laws and regulations of each country/region, and respect local history, culture and customs.
